The Month in Closed-End Funds: March 2021

Performance

For the fifth month in a row, equity CEFs on average witnessed plus-side performance on a NAV and market basis, rising 2.77% and 4.03%, respectively. However, for the eleventh month in 12 their fixed income CEF counterparts posted returns in the black on a NAV basis (+0.45%) and for the fourth month in five on a market basis (+2.08%). For Q1, the average equity CEF gained 6.36% while the average fixed income CEF rose 1.10%.

In volatile trading, the U.S. markets began the month in the black as the rise in bond yields began to steady after the February nonfarm payrolls report handily beat analyst expectations, providing some evidence that the economy is recovering from the impact of COVID-19. However, earlier in the week the NASDAQ continued its slide, closing at a three-month low as the tech-heavy index approached and eventually fell into correction territory. The Department of Labor announced the U.S. economy had added 379,000 new jobs for February, beating analyst expectations of 210,000. The unemployment rate declined to 6.2% from 6.3% in January. Near-month oil futures continued their ascent, rising to \$66.09/barrel (bbl), while gold closed down at \$1,698.50/oz.

The following week, the Dow closed at a new record above the 32,000 mark as investors bet on additional market gains from the massive injection of cash after Congress passed a \$1.9 trillion spending package, which was signed into law by President Joe Biden. Investors continued to rotate out of stay-at-home stocks and into cyclical stocks.

The Dow snapped its four-day record-breaking winning streak as investors hit the pause button ahead of the Federal Open Market Committee (FOMC) meeting. Despite investors learning that about 32% of the U.S. population had received at least one vaccine dose according to the Centers for Disease Control and Prevention (CDC), news that February U.S. retail sales and industrial production declined cast a slight pall over the markets. Nonetheless, the Dow closed at a new record high, rising above the 33,000 mark for the first time in history (its fastest 1,000-point gain—in just five days—on record) after the Federal Reserve said it would hold interest rates near zero through 2023.

At month end, despite learning of weaker-than-expected reports of consumer spending and income and rising Treasury rates, investors pushed the NASDAQ above the 13,000 mark again after President Biden announced a new target for coronavirus vaccinations of 200 million doses during his first 100 days in office. On the last trading day of the month, the S&P 500 booked another record close as investors anticipated the announcement of Biden's \$2.3 trillion infrastructure proposal, perhaps providing another round of stimulus to the economy. The 10-year Treasury yield finished the month at 1.74%.

The Treasury yield curve steepened during the month as investors evaluated what a third round of stimulus, a new infrastructure spending plan, and the continuation of loose monetary policy might have on the economy. Once again, the Treasury yield curve witnessed declines at the short end, while at the long end, the 10-year yield witnessed the largest gain for the month, rising 30 bps to close the month at 1.74%. The two- and 10-year Treasury yield spread (158 bps) widened 28 bps for the month.

The taxable bond CEFs macro-classification witnessed the largest narrowing of discounts for the month among Lipper's CEF macro-groups—229 basis points (bps) to 2.87%.
- Utility CEFs (+8.33%) for the first month in 15 posted the strongest one-month returns of the equity classifications in the CEF universe for March.
- For the first month in five, the High Yield CEFs (+0.67%) classification posted the strongest plus-side returns in the taxable fixed income CEF universe for March.

Given the likelihood of a new infrastructure spending package being signed into law under the Biden administration, the Treasury yield curve steepened for the month.
